Hello XXXXXX,

My name is Mohit and I am a rising Sophomore at UC Santa Cruz as a Computer Science major. I am looking for a Software Engineering internship and would love to work for Microsoft so I would like to tell you a bit about myself.

During the past year I have been developing my software engineering skills through various projects that delve in both front-end and backend. I used React.js and React Native in my projects with backend frameworks such as Django and Node.js while utilizing Google Cloud as my primary database to deploy websites and store data. An example of my work is when I made a website where people could login and post assignments or questions and have people respond to them. Users could view responses to their own posts and could delete their posts if they didn't want them displayed. I used React.js as my Front end and Firebase's Firestore as my backend to handle user authentication and post information.

Microsoft's mission to bring innovation's benefits to all regardless of their social or economic status is one that resonates with me and something that I want to help with. I believe that my experiences through my projects can create innovation that will benefit all who need it. I have attached my resume for consideration. If you believe that I would be a good fit I would love to talk!

Thank you,
Mohit Agrawal
